WGALWELD 7
CONTINUOUS GALVANIZED FINISH
THE NEW STANDARD OF SPRINKLER PIPES
WGALWELD 7
The coated style with continuous galvanized finish

**Characteristic features of WGalweld 7 pipes**
- Made of Wuppermann’s continuous pre-galvanized flat strip
- No flaking of zinc coating even in cases of subsequent roll-grooving on site. Corrosion protection is fully maintained.
- Corrosion resistant weld seam, inside and outside
- Smooth and homogeneous surfaces, inside and outside
  - ensure a safe and tight seat of rubber gasketed fittings on the pipe
  - make an organic coating finish cheaper
  - decrease the hydraulic pressure loss
- Optimized wall gauges effect a cost-efficient piping and easy mounting
- Larger inner diameter due to optimized wall gauges and best C-values make downsizing of the pipes and various system components possible (C-values are subject to regulatory approval)

**WGalweld 7 pipes on the test bench**
- Pipe standards: ASTM A 53 / ASTM A 135 / ASTM A 795
- Galvanizing standard: ASTM A 653
- Approved according to FM, UL & cUL
- Continuous inline measurement of pipe geometry
- Continuous inline eddy current and thermographic test of weld seam
- 1,235 psi hydro pressure test of each individual pipe
